Wings Pattern ↙

fur ↗

Elliptical Wings
Optimized for bursts of fast, tightly controlled flight. Excellent at taking off quickly, maneuvering through branches, and avoiding predators. Ordinary flight is slow and usually requires flapping.

Wings }
form

- FAWN EATS ONLY POISONOUS MUSHROOMS, THE NON-POISONOUS KIND ARE DISTASTEFUL FOR HIM.
- WHEN HE WAS BORN, FAWN HAD WHITE FUR, AND THE WINGS WERE MERELY SOME TINY FEATHERS.
- FAWN HAS MISMATCHING HORNS, THE RIGHT ONE IS SHORTER AND HAS ONE LESS BEND THAN THE LEFT ONE.
- HIS NATURAL HABITAT IS IN WATER, AND HE LOVES IT, BUT HE CAN BREATHE UNFILTERED AIR IF HE NEEDS TO.
- HIS REAL SIZE IS COMPARABLE TO A BEETLE
- HIS HORNS FALL OFF, LIKE NORMAL FAWNS, EACH CHANGE OF SEASON.
- IF THERE IS A SUDDEN CHANGE OF WEATHER, LIKE A HEAT WAVE OR A BLIZZARD, HIS HORNS MAY FALL OUT OF INSTINCT.
- HIS SLEEP SCHEDULE CONSISTS OF TWELVE TO FIFTEEN HOURS A DAY.
- HE CAN'T FLY ON AIR, HIS WINGS ARE ACTUALLY FOR SWIMMING.
- HE CAN'T HEAR ANYTHING, HE IS DEAF, HIS EARS SEND AND SENSE VIBRATIONS, LIKE ECHOLLOCATION.
- HIS EYES ARE BASED ON GOLDFISHES AND ARE REALLY REFLECTANT TO LIGHT. HE HAS A GREAT SIGHT.

THE END c:
